Susan Close

Project name: *Photography and the Built Environment: the summer research project*

Year: ongoing

Key words: Photography, Built Environment, Collaboration, Mentorship

Links: photographyandthebuiltenvironment.com

This project began as the mentorship of two FAUM Environmental Design undergraduate students who had won Undergraduate Research Awards in 2019, Hanna Hendrickson-Rebizant and Lindsay Mamchur. They worked on research for Close's book in progress, *Photography and the Built Environment*. In addition, the students, in collaboration with Close, created a website to document their summer research project. This website continues to be a platform for this research. Lindsay, now a Landscape Architecture graduate student, manages it and continues to work with Close as her Research Assistant.

Related Conference Paper: Lindsay Mamchur and Dr. Susan Close co-presented "Beyond the Frame: Collaborating on an Undergraduate Research experience" at the Teaching-Learning-Research, Design and Environments Virtual Conference at the Manchester School of Architecture on December 2, 2020. The conference was organized by AMPS, the Manchester School of Architecture and PARADE.
